

Deploying the application to AWS

"Amazon Elastic Compute Cloud (EC2) is a part of [Amazon.com's cloud-computing](#) platform, [Amazon Web Services](#) (AWS), that allows users to rent [virtual computers](#) on which to run their own computer applications" - Amazon.

To host our single web application, we (the big team) launched an Ubuntu Linux machine on EC2. We also used public a cloud storage resource available in AWS S3 to store media content for the application such as product photos.

We also can deployed a scalable MySQL server to AWS RDS.
